

Likelihood ratio tests for monotone functions, by Mouli Banerjee and Jon Wellner. *Ann. Statist.*, **29** (2001), 1699-1731.

Isotonic regression: another look at the change point problem, by Wei Biao Wu, Michael Woodroffe, and Graciella Mentz. *Biometrika*, **88** (2001), 793-804

On Degrees of freedom in shape restricted regression, by Mary Meyer and Michael Woodroffe. *Ann. Statist.*, **28** (2000), 1083-1104.

The iterative convex minorant algorithm for non-parametric estimation, by Gurt Jongbloed, *J.C.G.S.*, **7** (1999), 310-321.

The iterative convex minorant algorithm for non-parametric estimation, by Guert Jongbloed *JCGS*, **7** (1998), 310-321.

Isotonic inverse estimators for nonparametric deconvolution, by A.J. van Es, Gurt Jongbloed, and M.C.A. van Zuilen, *Ann. Statist.*, **26** (1998), 2394-2406.

Isotonic estimation and rates of convergence in Wicksell's Problem, by Piet Groeneboom and Gurt Jongbloed, *Ann. Statist.*, **23** (1995), 1518-1542.

Semi-parametric estimates under biased sampling, by Jiayang Sun and M. Woodroffe. *Statistica Sinica*, **7** (1997), 545-574.

Some problems in the estimation of unimodal densities, by Peter Bickel and J. Fan (1996) *Statistica Sinica*, **6** (1996), 23-45.

Isotonic smoothing splines under sequential designs, by Chim Tantiyawasdikul and Michael Woodroffe. *J. Statist. Plan. Inf.*, **38** (1994), 75-88.

A penalized maximum likelihood estimate of $f(0+)$ when f is non-increasing, by Michael Woodroffe and Jiayang Sun. *Statistica Sinica*, **3** (1993), 505-515.

Estimation of smooth monotone regression functions. *Ann. Statist.*, **19** (1991), 724-740.

A mixed primal dual basis algorithm for regression under inequality constraints: Applications to convex regression. *Scand. J. Statist.*, **16** (1989), 65-74.
